SUMMARY

Full-stack Software Engineer and AI builder specializing in autonomous multi-agent systems, LLM orchestration, and scalable microservices. Proven track record of shipping complex, production-ready applications under tight constraints, validated by 2x national hackathon wins and selection for the Y Combinator Startup School.

EDUCATION

Nitte Meenakshi Institute of Technology

Bachelor of Engineering in Computer Science and Business Systems | **GPA: 9.25/10**

Yelahanka, Bangalore
Aug. 2023 – July 2027

EXPERIENCE

Software Engineering Intern — CIOS AI Panel

theladder.ai | React, Node.js, Supabase, OpenAI API, Anthropic API, LLM Routing, BYOK Architecture

- Engineered the **Client Intelligence Operating System (CIOS)** — a multi-tenant AI workspace that permanently persists client context across sessions, eliminating the 30–90 minute context-reconstruction overhead teams face with consumer AI tools.
- Built a **model-agnostic LLM routing layer** (BYOK) supporting OpenAI, Anthropic, and Gemini with per-project **token cost tracking**; designed a **Skills Library** that auto-injects institutional prompts and enforced **RBAC** workspace isolation at the API level via Supabase Auth.

Bangalore, India
Mar 2026 – Present

PROJECTS

Velocis | Software Engineer | Node.js, React, TypeScript, AWS EC2, Amplify, DynamoDB, DeepSeek, Three.js

- Architected Velocis, an AI-powered developer platform featuring “**Sentinel**” for prompt-driven IDE code generation with single-click GitHub deployment, and “**Visual Cortex**” for comprehensive repository architecture and dependency mapping.
- Engineered an automated **CI/CD pipeline** that triggers on repository push to execute AI-driven code reviews, auto-generate QA tests and API documentation, and perform dynamic infrastructure cost prediction.

Feb 2026

InfraZero | Software Engineer (Independent) | React, TypeScript, Node.js, Rust, WebAssembly, WebSockets

- Architected a **local-first Visual IDE** for distributed systems with a three-layer separation (Visual/Logical/Runtime) enabling **cross-functional teams** to collaboratively model architectures via real-time **multiplayer WebSocket** workspace before writing code, with ML text-to-graph generation.
- Engineered a **deterministic Rust/WebAssembly physics simulation engine** compiled to WASM for hardware-accelerated, browser-native failure replay; implemented **SHA-256 graph hashing** to guarantee zero-drift between simulation runs and production topology state.

Mar 2026 – Present

TECHNICAL SKILLS

Languages: Python, TypeScript, **JavaScript (ES6+)**, HTML, CSS, SQL, Bash

Web Technologies & Frameworks: React.js, Node.js, Express, Flask, **REST API**, Three.js, CesiumJS

AI & Machine Learning: LLM Integration (OpenAI, Anthropic, Gemini), DeepSeek, Groq, Llama 3, BYOK Routing, Token Optimization

Databases & Storage: Amazon DynamoDB, Supabase (PostgreSQL), Firebase, MongoDB

Cloud & DevOps: AWS (EC2, Amplify, API Gateway, Bedrock), GCP (Cloud Run), Docker, **GitHub Actions**, CI/CD

Architecture & Practices: **SOA**, **Microservices**, **Modeling & Simulation**, Multi-tenant Systems, RBAC, Agile

ACHIEVEMENTS

1st Place — HackSurgeX | NMIT

- Built **Datareaper** — an autonomous, multi-agent AI system for personal data privacy “Search & Destroy,” automatically locating and removing exposed PII across the web.

Apr 2026

Selected Attendee — Y Combinator Startup School, Bangalore

- Chosen as one of **2,000 attendees** from a pool of **25,000 applicants** (founders, Olympiad winners, professionals); awarded **\$25,000 in YC AI credits** for startup support.

2026

Shortlisted & Funded — AWS AI for Bharat 2026 | National Hackathon

- Nationally shortlisted for **Velocis** among hundreds of submissions; awarded **\$100 AWS credits** to validate a multi-agent serverless AI architecture under real production traffic.

Feb 2026

2nd Place — Google Techsprint | GDG NMIT

- Shipped **GeoCortex** end-to-end — security-first proxy, **60fps** WebGL rendering, and a fully automated **CI/CD DevOps pipeline**.

Jan 2026

1st Place — Sparklab Hackathon | Nitte Meenakshi Institute of Technology

- Led a **30-hour sprint** delivering a fault-tolerant, event-driven system — bi-directional real-time tracking (Socket.io), geofenced alerting (Twilio), and geospatial clustering (MongoDB).

Oct 2025
